

## Mixed Doubles Tips for Timely Play

Mixed Doubles is a fast-paced game. An 8-end game should normally be completed in about 90 minutes. The following tips will help you keep up the pace of your game.

- Team with hammer should set up stationary rocks for the end.
- Be ready to deliver when it is your turn.
- Only the player not shooting should remain at the far end to sweep opponents shots behind tee line and scout the next shot.
- Allow an average of 60 seconds per shot, *including time required for scouting teammate to skate back to the near end of the sheet*. If you are taking more than a minute per shot, you are too slow.

## Mixed Doubles FAQs

- Front stationary stone goes **behind** the appropriate poker chip for both normal and power play.
- Rear stationary stone is positioned with the rear of the stone even with the back of the four-foot circle in normal play; for power play, rear stationary stone is placed with the rear of the stone even with the tee line and bisecting the 8-foot circle.
- No stationary stone may be removed from play **until the fourth delivered stone of the end**.
- It is permissible for the shooter to be removed from play prior to the fourth stone delivered.
- The power play can only be employed by the team with choice of stone placement.
- The power play cannot be used in an extra end.
- Please remove marking tape from stationary and dead stones at the end of your game.
